

Digital Wallet Transfer Limits & Account Tiers

Top 20 Prioritized Test Cases — Part 1

Document: Deliverable 2 — Test Cases Document

Sequence: Ordered by Risk Wave (Wave 1 → Wave 4)

Date: August 31, 2026

Top 20 Prioritized Test Cases Suite

TC-01: Tier 1 transfer within per-transaction and daily limit succeeds

P1

Preconditions: Account is Tier 1 (KYC level 1 complete). No prior transfers today.

Steps: 1. Initiate wallet-to-wallet transfer of 15,000. 2. Submit and observe result.

Expected Result: Transfer accepted; remaining daily limit reduced to 35,000.

TC-02: Tier 1 transfer exactly at the per-transaction limit succeeds

P1

Preconditions: Account is Tier 1. Daily limit not yet consumed.

Steps: 1. Initiate transfer of exactly 20,000 (per-transaction ceiling). 2. Submit.

Expected Result: Transfer accepted — boundary value itself is not rejected.

TC-03: Tier 1 transfer one unit over per-transaction limit is rejected

P1

Preconditions: Account is Tier 1.

Steps: 1. Initiate transfer of 20,001. 2. Submit.

Expected Result: Transfer rejected with clear error identifying per-transaction limit; no deduction from daily limit.

TC-04: Cumulative Tier 1 transfers reaching exactly daily limit succeed

P1

Preconditions: Account is Tier 1. No prior transfers today.

Steps: 1. Send two transfers of 20,000 and one of 10,000 in sequence (total 50,000). 2. Confirm each is accepted.

Expected Result: All three transfers succeed; remaining daily limit reaches exactly 0 after third transfer.

TC-05: Tier 1 transfer exceeding remaining daily limit rejected with remaining amount

P1

Preconditions: Account is Tier 1 with 10,000 consumed (40,000 remaining).

Steps: 1. Attempt transfer of 45,000 (exceeds 40,000 remaining). 2. Submit.

Expected Result: Transfer rejected; error message states remaining limit of exactly 40,000, per Rule 7.

TC-06: Tier 2 per-transaction and daily boundaries behave identically at Tier 2 values

P1

Preconditions: Account is Tier 2 (KYC level 2 complete).

Steps: 1. Repeat TC-02 and TC-03 equivalents using 200,000 and 200,001. 2. Submit each.

Expected Result: 200,000 accepted; 200,001 rejected — confirms boundary logic at Tier 2 ceiling.

TC-07: Tier 3 single transfer under daily limit succeeds despite no per-transaction cap**P1**

Preconditions: Account is Tier 3 (KYC level 3 complete). No prior transfers today.

Steps: 1. Initiate single transfer of 4,500,000. 2. Submit.

Expected Result: Transfer accepted — confirms absence of per-transaction cap for Tier 3 per Rule 1.

TC-08: Tier 3 single transfer exceeding daily limit is rejected despite no per-transaction cap**P1**

Preconditions: Account is Tier 3. No prior transfers today.

Steps: 1. Initiate single transfer of 6,000,000 (exceeds 5,000,000 daily limit). 2. Submit.

Expected Result: Transfer rejected — confirms daily limit is a hard ceiling even without per-transaction caps.

TC-09: Transfer to user's own linked bank account is exempt from all limits**P1**

Preconditions: Account is Tier 1. Verified own-linked bank account exists.

Steps: 1. Initiate transfer of 500,000 to own linked bank account. 2. Submit.

Expected Result: Transfer accepted in full per Rule 4 exemption regardless of tier limits.

TC-10: Transfer to non-owned bank account is not exempt even at same bank**P2**

Preconditions: Account is Tier 1. Third-party account at same destination bank available.

Steps: 1. Initiate transfer of 500,000 to third-party account. 2. Submit.

Expected Result: Transfer rejected under normal Tier 1 limits — confirms exemption is tied to ownership, not bank.

TC-11: Daily limit is available again after reset boundary**P1**

Preconditions: Daily limit fully consumed on day N.

Steps: 1. Attempt transfer at 23:59 on day N (confirm reject). 2. Advance clock past midnight. 3. Retry at 00:01 on day N+1.

Expected Result: 23:59 attempt rejected; 00:01 attempt accepted, confirming full limit restoration.

TC-12: Pending transfer across midnight reset is not double-counted**P2**

Preconditions: Depends on Q2 answer. Transfer created at 23:58 day N still pending at 00:02 day N+1.

Steps: 1. Create transfer pending across reset. 2. Check remaining limit on day N+1 immediately after reset.

Expected Result: Pending amount counted exactly once against correct day per Q2 resolution.

TC-13: Failed transfer immediately restores amount to daily limit**P1**

Preconditions: Account consumed daily limit via transfer now in failed state.

Steps: 1. Note remaining limit before failure. 2. Trigger/observe state move to 'failed'. 3. Check remaining limit.

Expected Result: Failed amount added back to remaining daily limit exactly once.

TC-14: Reversed transfer restores amount without double-crediting across day boundary**P2**

Preconditions: Depends on Q4 answer. Transfer sent day N reversed on day N+1 after reset.

Steps: 1. Send transfer day N. 2. Reverse on day N+1. 3. Check remaining limit on day N+1.

Expected Result: Credit applied consistently per stated policy without extra headroom created on day N+1.

TC-15: Scheduled transfer executes at 8:00 AM on scheduled day**P2**

Preconditions: Ample remaining limit. Transfer scheduled for future date.

Steps: 1. Schedule transfer for following day. 2. Advance to 8:00 AM on scheduled day. 3. Observe execution.

Expected Result: Transfer executes at 8:00 AM and deducts from that day's limit, not scheduling day.

TC-16: Scheduled transfer meeting exhausted limit at 8:00 AM handled per resolved policy**P2**

Preconditions: Depends on Q5 answer. Limit consumed before 8:00 AM on scheduled day.

Steps: 1. Schedule transfer. 2. Consume full limit before 8:00 AM. 3. Observe outcome at 8:00 AM.

Expected Result: Handled per resolved policy (reject-and-notify) — must not silently disappear.

TC-17: Pending transfer keeps tier limit from creation across tier upgrade**P2**

Preconditions: Depends on Q7 answer. Tier 1 pending transfer present when upgrading to Tier 2.

Steps: 1. Create Tier 1 pending transfer. 2. Upgrade to Tier 2. 3. Inspect limit basis after settlement.

Expected Result: Evaluated against single consistently-defined tier basis per Q7 resolution.

TC-18: Tier upgrade takes effect immediately for new transfers**P1**

Preconditions: Account is Tier 1 and just completed Tier 2 KYC.

Steps: 1. Initiate new transfer of 150,000 immediately after upgrade. 2. Submit.

Expected Result: Transfer accepted immediately with no delay per Rule 6.

TC-19: Simultaneous transfers exceeding remaining limit cannot both succeed**P3**

Preconditions: Account has exactly 30,000 remaining daily limit.

Steps: 1. Fire two transfers of 20,000 at the same instant. 2. Observe outcomes.

Expected Result: Exactly one succeeds, one rejected; limit never goes negative.

TC-20: Rejection error message always reflects true remaining limit**P2**

Preconditions: Arbitrary partially-consumed daily limit.

Steps: 1. Attempt transfer exceeding remaining limit. 2. Read error message.

Expected Result: Error message states actual remaining limit matching account transfer history per Rule 7.
